| <b>Title :</b>        | Procedure for the regulatory inspection of high voltage electrical installations not owned by electric power transmission and distribution entities. Part 1: Transformer substations and their technical annexes.   |
| <b>Scope :</b>        | The purpose of this standard is to describe the inspection methodology to check the regulatory safety conditions of high voltage electrical installations. This standard is applicable to the inspection of transformer stations, whose owner is not a transmission and distribution entity, subject to the inspection regime. It also applies to transformer stations belonging to electrical installations for the production of electrical energy from wind or solar power with a capacity of less than 100 MVA. |

**Title :** Fibre reinforced concrete. Fibres for concrete. Alkali resistant glass fibres. Definitions, classification and specifications.  
**Scope :** This standard specifies requirements for alkali-resistant (AR) glass fibres for structural or non structural in concrete, mortar and grout use.  
 Note: The structural use of fibres in concrete occurs when fibres are intended to contribute the load bearing capacity of a concrete element. This standard covers these fibres to be used in concrete and mortars, including sprayed concrete, concrete for ground and paving use, prefabricated concrete, in situ, and repair concrete.

**Title :** Products and systems for superficial protection of concrete. Recommendations  
**Scope :** The purpose of this document is to define the composition of the products and systems used in the surface protection of concrete, their application and the control of the properties they must satisfy.  
 The surface protection methods covered in this report are as follows:

- Hydrophobic impregnation systems.
- Systems to protect against carbonation.
- Crack bridging systems.
- Systems resistant to chemical aggression.
- Protective systems with physical surface enhancement capabilities.

**ICS :**  
**National Ref :** PNE 83519  
**Title :** Concrete with fibres. Test method for the characterization of the flexural tensile strength of strain hardened concretes.  
**Scope :** This standard specifies a method for determining the flexural tensile strength of fibre-reinforced concrete on moulded specimens. The method makes it possible to determine a set of values for the residual flexural tensile strength.  
This test method is intended for concretes showing strain-hardening flexural behaviour beyond the elastic range of the bending response, with an increasing load-shrinkage curve up to its maximum load, without steep dips, and fulfilling the conditions given in 3.8.  
This test method is intended for fibres of any type and combination with a maximum length of 40 m.

**Title :** Field procedures for the assessment of the centring uncertainty of geodetic and surveying instruments.  
**Scope :** This standard specifies field procedures to be adopted to assess the uncertainty in the centring of topographic and geodetic instruments, and their ancillary equipment, in any type of surveying measurement, including building and industrial measurements. These instruments include all those that have a plumbing system (plumb bob, optical or laser plummet) to set up on the desired point on the ground materialized by means of a signal, including theodolites, total stations or GNSS receivers. In the case of GNSS receivers, the procedures are applicable as long as the plumbing system is located on the tribrach and this is interchangeable, so that a theodolite or total station can be mounted on it. The procedures are based on the document by García-Balboa et al. (2018). They could also apply a laser scanner, adapting it in a similar way to that described in Tsakiri et al. (2015).

**Title :** Water quality – Determination of radium 226 by emanometry without pre-concentration

**Scope :** This document specifies a method for the determination of the activity concentration of radium 226 in water by scintillation emanometric method without pre-concentration of radium 226 by precipitation. The method is applicable to the determination of the activity concentration of radium 226 in water samples with a very low concentration of suspended solids, for example in samples of ground water and drinking water.

which indicates both the volume at measuring conditions and the converted volume at thermodynamic reference conditions, with maximum flowrate greater than 10 m<sup>3</sup>/h (meter class >G6) and with point-to-point communication. Part 14-4: PP4 communication profile.

**Scope :**

This technical specification completes the requirements, already specified in the relevant parts of UNI/TS 11291 series, in order to allow interchangeability of measurement systems that communicate in point-to-point mode, serving Redelivery Points of end use of the distribution:

- which indicates both the volume at measuring conditions (V<sub>m</sub>) and the converted volume at thermodynamic reference conditions (V<sub>b</sub>); and
- with meters having maximum flowrate greater than 10 m<sup>3</sup>/h (class >G6).

This technical specification does not apply for interchangeability of measurement systems that communicate in point-to-point mode, serving Redelivery Points of end use of the distribution networks:

- which only indicates the converted volume at thermodynamic reference conditions (V<sub>b</sub>); and
  - with meters having maximum flow rate greater than 10 m<sup>3</sup>/h and less than or equal to 160 m<sup>3</sup>/h (class >G6 and ≤G100); and
  - with maximum working pressures not exceeding 0.5 bar,
- which are covered by UNI/TS 11291-13-4.

This technical specification defines the objects needed for the management of the transmission media and state machines for communication management.

**Title :** Requirements for the certification of persons scheme in the field of industrial safety.

---

**Scope :** This standard establishes requirements for the certification scheme of persons, according to UNE-EN ISO/IEC 17024, when the certification of accredited persons constitutes one of the access routes to the professions included in the different industrial safety regulations. This standard guarantees transparency and objectivity in the assessment of the competences of certified persons and contributes to the uniformity of action of certification bodies wishing to become accredited in the field of industrial safety. This standard establishes principles and requirements that are transversal to the different categories of persons operating in the field of industrial safety and mainly describes elements of the evaluation process to be followed by certification bodies, as well as other requirements aligned with the provisions of chapter 8 of the UNE-EN ISO/IEC 17024.

**ICS :****National Ref :** PNE 19604**Title :** Management system for socio-labor compliance. Requirements with guidance for use.**Scope :** Specifies the requirements and provides the guidelines to establish, develop, implement, evaluate, maintain and improve an effective socio-labor compliance management system within an organization.

This standard is applicable to all kind of organizations, regardless of the type, size and nature of their activity, whether in public, private, profit or not-for profit sector..

**NOTE**

In the case of public sector organizations, the standard is applicable to their workforce.

The standard is applicable to the following areas:

a) The exercise of constitutional rights in the organization and, in particular, those related to:

- equality and non-discrimination;
- the protection of particularly vulnerable groups, with special attention to disability.

b) The individual employment relationship and, in particular:

- access to employment;
  - contractual modalities;
  - basic labor rights and duties;
  - salary;
  - working time;
  - labor performance and the workplace;
  - modification of working conditions;
  - suspension and vicissitudes of the employment contract;
  - termination of the employment contract.
-

c) The collective labor relations and, in particular, to:

- freedom of association;
- information, consultation and participation of workers' representatives;
- collective labor conflict measures;
- collective labor bargaining.

d) Social protection and, in particular, to:

- Social Security benefits;
- voluntary improvements;
- Supplementary social security systems.

e) Any other social and labor obligation that the organization undertakes to comply with.
