<b>National Ref :</b>	UNI1615740		
<b>Title :</b>	Aluminium and aluminium alloys - Plates sawn from Al-Mg alloy plates - Technical delivery and testing conditions		
<b>Scope :</b>	<p>This standard specifies the requirements applicable to aluminium alloy Al-Mg plates, obtained by dissection of ingots/slabs made also for rolling.</p> <p>Plates are classified according to the checks carried out to certify their structural quality level (Type) and the degree of surface finish (Class). These plates can be used for the manufacture of tool-finished parts for general applications where good dimensional stability, good corrosion resistance and medium to high mechanical properties are required. Depending on the characteristics declared by the supplier. Plates are classified as Type M (mechanical) or Type R (rolling).</p> <p>For structural applications only plates classified as Type M shall be used, bearing in mind however that, even with the same chemical composition, these plates have generally lower plasticity and fracture toughness than those obtained by hot rolling.</p> <p>This standard does not apply to plates obtained by the hot-rolling process, which are considered in a separate European standard.</p>

Title :	Anodized aluminium. Characteristics of the surface coating of products for construction				
Scope :	<p>The anodic oxidation coatings considered in this standard are those specified by the methodology described in NP EN ISO 7599. This document, as a complement to that standard, specifies the requirements for the key characteristics of the coating on anodized aluminum products intended for use in building construction, together with the corresponding test methods.</p> <p>This document also provides guidance on selecting the most appropriate anodizing thickness class as a function of environmental aggressiveness and other service conditions.</p> <p>This document applies to aluminum products such as: profiles for window and door framing (fenestration systems), sheet for interior or exterior cladding and roofing, and other building components in which the anodic oxidation layer is produced by sulfuric acid-based anodizing. It may also be applied to anodized aluminum products intended for other uses where the anodic layer is considered of primary importance for its corrosion-protective properties.</p>

**ICS :** 91.060.40  
**National Ref :** ÖNORM B 8211  
**Title :** Chimneys - exhaust gas removal from fan-assisted atmospheric gas fireplaces  
**Scope :** This document deals with the exhaust gas discharge of type-tested fan-assisted atmospheric gas fireplaces (excluding fireplaces with fan burners). For the purposes of this Austrian Standard, pre-mix surface burners are to be regarded as atmospheric.  
 Gas fireplaces must generally be connected to a catcher.  
 If permitted by state law and no suitable catcher is available, other solutions are also possible.  
 This Austrian Standard only deals with the exhaust gas discharge from gas fireplaces up to the point where they flow into a catcher or into a catcher system (e.g. LAS system) or up to the point where an exhaust gas discharge flows out into the open.  
 Up to a total nominal heat load of 50 kW, the provisions of the ÖVGW guideline G 1 must be observed; for a total nominal heat load of more than 50 kW, those of the ÖVGW guideline G 4 and ÖNORM H 5170 must be observed.  
 This Austrian Standard also deals with the location of cleaning and inspection openings in the exhaust gas discharge.

Title :	Road construction. Cement concrete pavements		
Scope :	This standard applies to the construction and testing of unreinforced cement concrete pavements for motorways and expressways, roads of class I., II. and III., local and special-purpose roads, movement areas at airports and other traffic areas laid by finishers or by other mechanized means. The standard specifies the requirements for the preparation, implementation and inspection of the construction of cement concrete pavements. It takes into account the requirements of the relevant applicable European and national standards.

 Title : Rolling bearings — Tapered roller bearings — Designation system (ISO 10317:2008 + Amd 1:2013)  
 Scope : This Standard establishes a system for the designation of metric size tapered roller bearings produced in accordance with ISO 355.  
 The system covers designations for single-row bearings, double-row bearings, and bearings with flanged outer rings. It also establishes designations for separate inner subunits (inner ring, tapered rollers and cage) and outer rings of such bearings.  
 This Standard does not apply to bearings or inner subunits or outer rings which in any respect deviate from ISO 355.

<b>National Ref :</b>	ÖNORM M 9416		
<b>Title :</b>	Emission loads for emission inventories		
<b>Scope :</b>	Emission loads should be determined as correctly as possible on the basis of measured values and emission factors. This approach is to be harmonised throughout Austria so that these emission loads can be used for emission inventories. The aim is to establish comparability between emission loads from emission inventories and data portals. Stakeholder who officially disclose emission data are to be given assistance on how to collect and pass on such data in order to achieve the above mentioned goal.

<b>Title :</b>	Guideline for the qualification of economic operators (organizations) involved in the production chain of biofuels and bioliquids for traceability and mass balance purposes		
<b>Scope :</b>	This technical specification is developed as tool for the implementation of the ministerial decree 7 August 2024 that defines a scheme for the certification of biofuels. It defines a qualification scheme for organizations, here defined as "economic operators", involved in the production chain of biofuels, other than biomethane, bioliquids and their intermediates and by-products produced in a sustainable way according with European and national criteria. It gives also requirements for the implementation of a traceability system that allows an organization to comply with the requirements requested and describes the requirements of mass balance management. It describes the requirements of accounting management, with or without physical segregation of products, the mass balance implemented in the European and national legislative framework.

**Title :** Gas infrastructure - Pipelines for maximum operating pressure over 16 bar - General requirements for design  
**Scope :** This standard establishes uniform design requirements for steel gas pipelines with operating pressure over 16 bar to assure the reliability of usage, safety of people, protection of environment and prevention of accidents. This standard method for determining the safety zone can be used to calculate the safety zone of constructions which will be built near an existing gas pipeline with operating pressure over 16 bars after the technical condition of the existing pipeline has been examined. When determining the safety zone for an existing gas pipeline with operating pressure over 16 bar, technical conditions and standards that were used during the construction of the pipelines should be considered.

**Title :** Activities for prevention and protection service for health and safety at work

**Scope :** The standard focuses on identifying, assessing, and managing activities performed within the Prevention and Protection Service scope, accordingly with the law in force (Clause 33 of Legislation 81/2008). It is addressed to the employer and in general to all the entities involved in the health and safety at work planning and management. The Prevention and Protection Service, together with other subjects, supports the employer preparing risk assessment and management. It is therefore necessary organise a guideline to allow employers and all parties involved to efficiently evaluate those necessary activities for complying with the legislation and with organization needs, through an impartial, agile, scalable to monitor and replicable criteria.

**Title :** Smoke and heat control systems. Horizontal flow powered ventilation SYSTEMS (SVMH-C) for enclosed car parks  
**Scope :** This document gives minimum design, installation and commissioning requirements for powered smoke and heat control systems for enclosed car parks using horizontal flow powered ventilation, with or without sprinkler protection, on one or more levels, for cars and light commercial vehicles (max 3,5 t), to reach the design objectives outlined in this document .

This document is applicable for car parks with vehicles powered by petrol, diesel, electricity, CNG or LPG.

NOTE 1 For the purpose of this document for smoke ventilation systems, it is assumed that cars powered by electricity, CNG (compressed natural gas) or LPG (liquefied petroleum gas) will have similar HRR to vehicles powered by petrol or diesel.

NOTE 2 Cars powered by hydrogen are not covered by this document.

This document only covers traditional car parks that are with cars parked alongside each other, with common car access lanes. It does not cover other forms of car parking systems, such as stacking systems.

---

This document does not cover requirements for day-to-day ventilation.

Any other risks than fire from cars are not covered by this document.
