**Title :** Thermoplastics piping and ducting systems - External non-pressure and pressure piping systems of unplasticized poly(vinyl chloride) (PVC-U), polypropylene (PP) and polyethylene (PE) for the conveyance of water, drainage and sewage - Practices for installation and inspection

---

**Scope :** This standard specifies rules of transportation, handling, storage, installation, inspection and testing of thermoplastic piping systems of PVC-U, PP, and PE to be used for the conveyance of water, drainage and sewage under gravity and pressure conditions underground.

It updates and expands the current practices for installation and inspection of these systems.

It contains definitions and technical parameters essential for installation systems used in product standards for thermoplastic pipes and fittings.

It correlates them with relevant application areas, and requirements that are detailed in standards concerning requirements of the system.

It is intended to be used for systems of nominal size up to and including DN3000.

**National Ref :** ÖNORM H 5195-2  
**Title :** Heat transfer media for closed heating or cooling systems - Part 2: Antifreezing protection in heating systems and other systems using heat transfer fluids with antifreezing protection

**Scope :**

This document specifies requirements for systems with frost-protected heat carriers and is applicable to directly or indirectly heated, closed, water-based heating systems according to ÖNORM H 12828, to water-based, central cooling systems for air conditioning and industrial applications according to ÖNORM H 6151, as well as to thermal solar systems according to ÖNORM H 7777.

In this document, heating systems and other systems with frost-protected heat carriers are briefly referred to as frost-protected systems.

This document is to be applied to newly constructed systems. Additional measures for existing systems are described in Section 9. For existing systems, this ÖNORM is to be applied for the inspection of operating conditions regarding compliance with the requirements for the frost-protected heat carrier.

This document

- describes the properties of glycol-based antifreeze agents and their use in heating systems, air conditioning systems, ventilation systems, cooling systems, solar systems, and in heat source systems of heat pumps;
- outlines the measures to achieve sufficient frost protection;
- specifies the necessary measures to prevent corrosion when using antifreeze agents;
- provides guidance on the disposal of water-antifreeze mixtures.

**Title :** Energy management - Energy services companies (ESCO) - General requirements, checklist for verification of organization requirements and service offer contents  
**Scope :** This standard defines the general requirements of energy service companies (ESCO) that provide their customers with energy efficiency services in compliance with UNI CEI EN 15900, with guarantee of results, and applicable mandatory requirements.  
 In particular, it defines the general requirements and capacities (organizational, diagnostic, design, management, economic and financial) that an ESCO shall possess in order to be able to offer the energy efficiency services and other specific activities, described herein, to its final customers.  
 It also provides a checklist for verifying the capabilities of ESCOs and the minimum content of the contractual offer of an energy efficiency improvement service supplied by an ESCO.
